State Prescription Drug Monitoring Programs and Overdose Fatality Review Boards Join at Workgroup Held to Strengthen Collaborations to Prevent Future Overdoses

ILPMP IT Manager, Ed Dowllar, had the opportunity to attend the **PDMP and OFR Workgroup: Partnering to Inform and Advance Prevention**, held in Minneapolis, Minnesota on June 11-12, 2024. This one and a half-day, in-person convening helped strengthen PDMP and OFR collaborations to better understand and support reduction in the misuse of prescription drugs using data, safety efforts, and increased coordination between parties participating in PDMP and OFRs to ultimately prevent future overdose deaths. This meeting included cross-state agency collaboration, roundtable discussion, workgroup sessions, and expert-led presentations.

FDA Releases New Campaign to Help Primary Care Providers Recognize and Treat Opioid Use Disorder (OUD)

Providers in a variety of primary care settings should work together with their

patients to manage care for OUD. You can do this the same way you practice shared decision-making to help patients manage asthma, diabetes, or hypertension. Some people may benefit from a prescription medication for opioid use disorder (MOUD).

As a primary care provider treating other chronic health conditions, you are in a key position to also diagnose and treat OUD.

The Prescribe with Confidence Campaign goal is to increase the number of health care providers who can recognize OUD and prescribe medication to treat OUD when indicated.

Watch below as the FDA interviews Dr. Matthew Hahn's about his experience with prescribing OUD medication in his small private practice in Maryland.

U.S. Overdose Deaths Decrease in 2023, First Time Since 2018

The **CDC released on May 15, 2024, provisional data** from the CDC's National Center for Health Statistics that there were an estimated 107,543 drug overdose deaths in the United States during 2023—a decrease of 3% from the 111,029 deaths estimated in 2022. This is the first annual decrease in drug overdose deaths since 2018.

The new data show overdose deaths involving opioids decreased from an estimated 84,181 in 2022 to 81,083 in 2023. While overdose deaths from synthetic opioids (primarily fentanyl) decreased in 2023 compared to 2022, cocaine and psychostimulants (like methamphetamine) increased.

**SAMHSA released a revised
2024
Overdose Prevention and
Response Toolkit**

Navigating Pain Management, Safe Opioid Prescribing, and Opioid Use Disorder

A three-hour program designed to meet the educational needs for physicians, nurses, and pharmacists. The program is accredited in 6, 30-minute modules.

SOUTHERN ILLINOIS UNIVERSITY
EDWARDSVILLE

ILPMP
Illicit Prescription Monitoring Program

Continuing Education Program

Navigating Pain Management, Safe Opioid Prescribing, and Opioid Use Disorder

Session 1: Pain taxonomy, pathogenesis, and assessment
Session 2: Developing a patient-centered pain treatment plan
Session 3: Non-opioid analgesics: Evidence and clinical Pearls
Session 4: Opioid analgesics: From A to Z
Session 5: Clinical use of opioids: Safe prescribing and monitoring
Session 6: The exit strategy: When the treatment becomes the problem

Faculty:
June Oliver, MSN, APRN/CNS
Laura Meyer-Junco, PharmD, BCPS, FASCP
Chris Herndon, PharmD, BCACP, FCCP
Camille Dunkley, MD, MHA, MS
Noah Cooperstein, MD

The Illinois Prescription Monitoring Program (ILPMP) is an electronic database that collects, tracks, and stores reported dispensing data on Schedule II-V controlled substances, selected drugs of interest, and other health information. The Illinois Department of Human Services oversees the ILPMP, authorized by the Illinois Controlled Substances Act (720 ILCS 570/316). The ILPMP adheres to HIPAA and all access, disclosure, and confidentiality provisions of Illinois Law.
